Introduction

SWIR IN THE INFRARED SPECTRUM

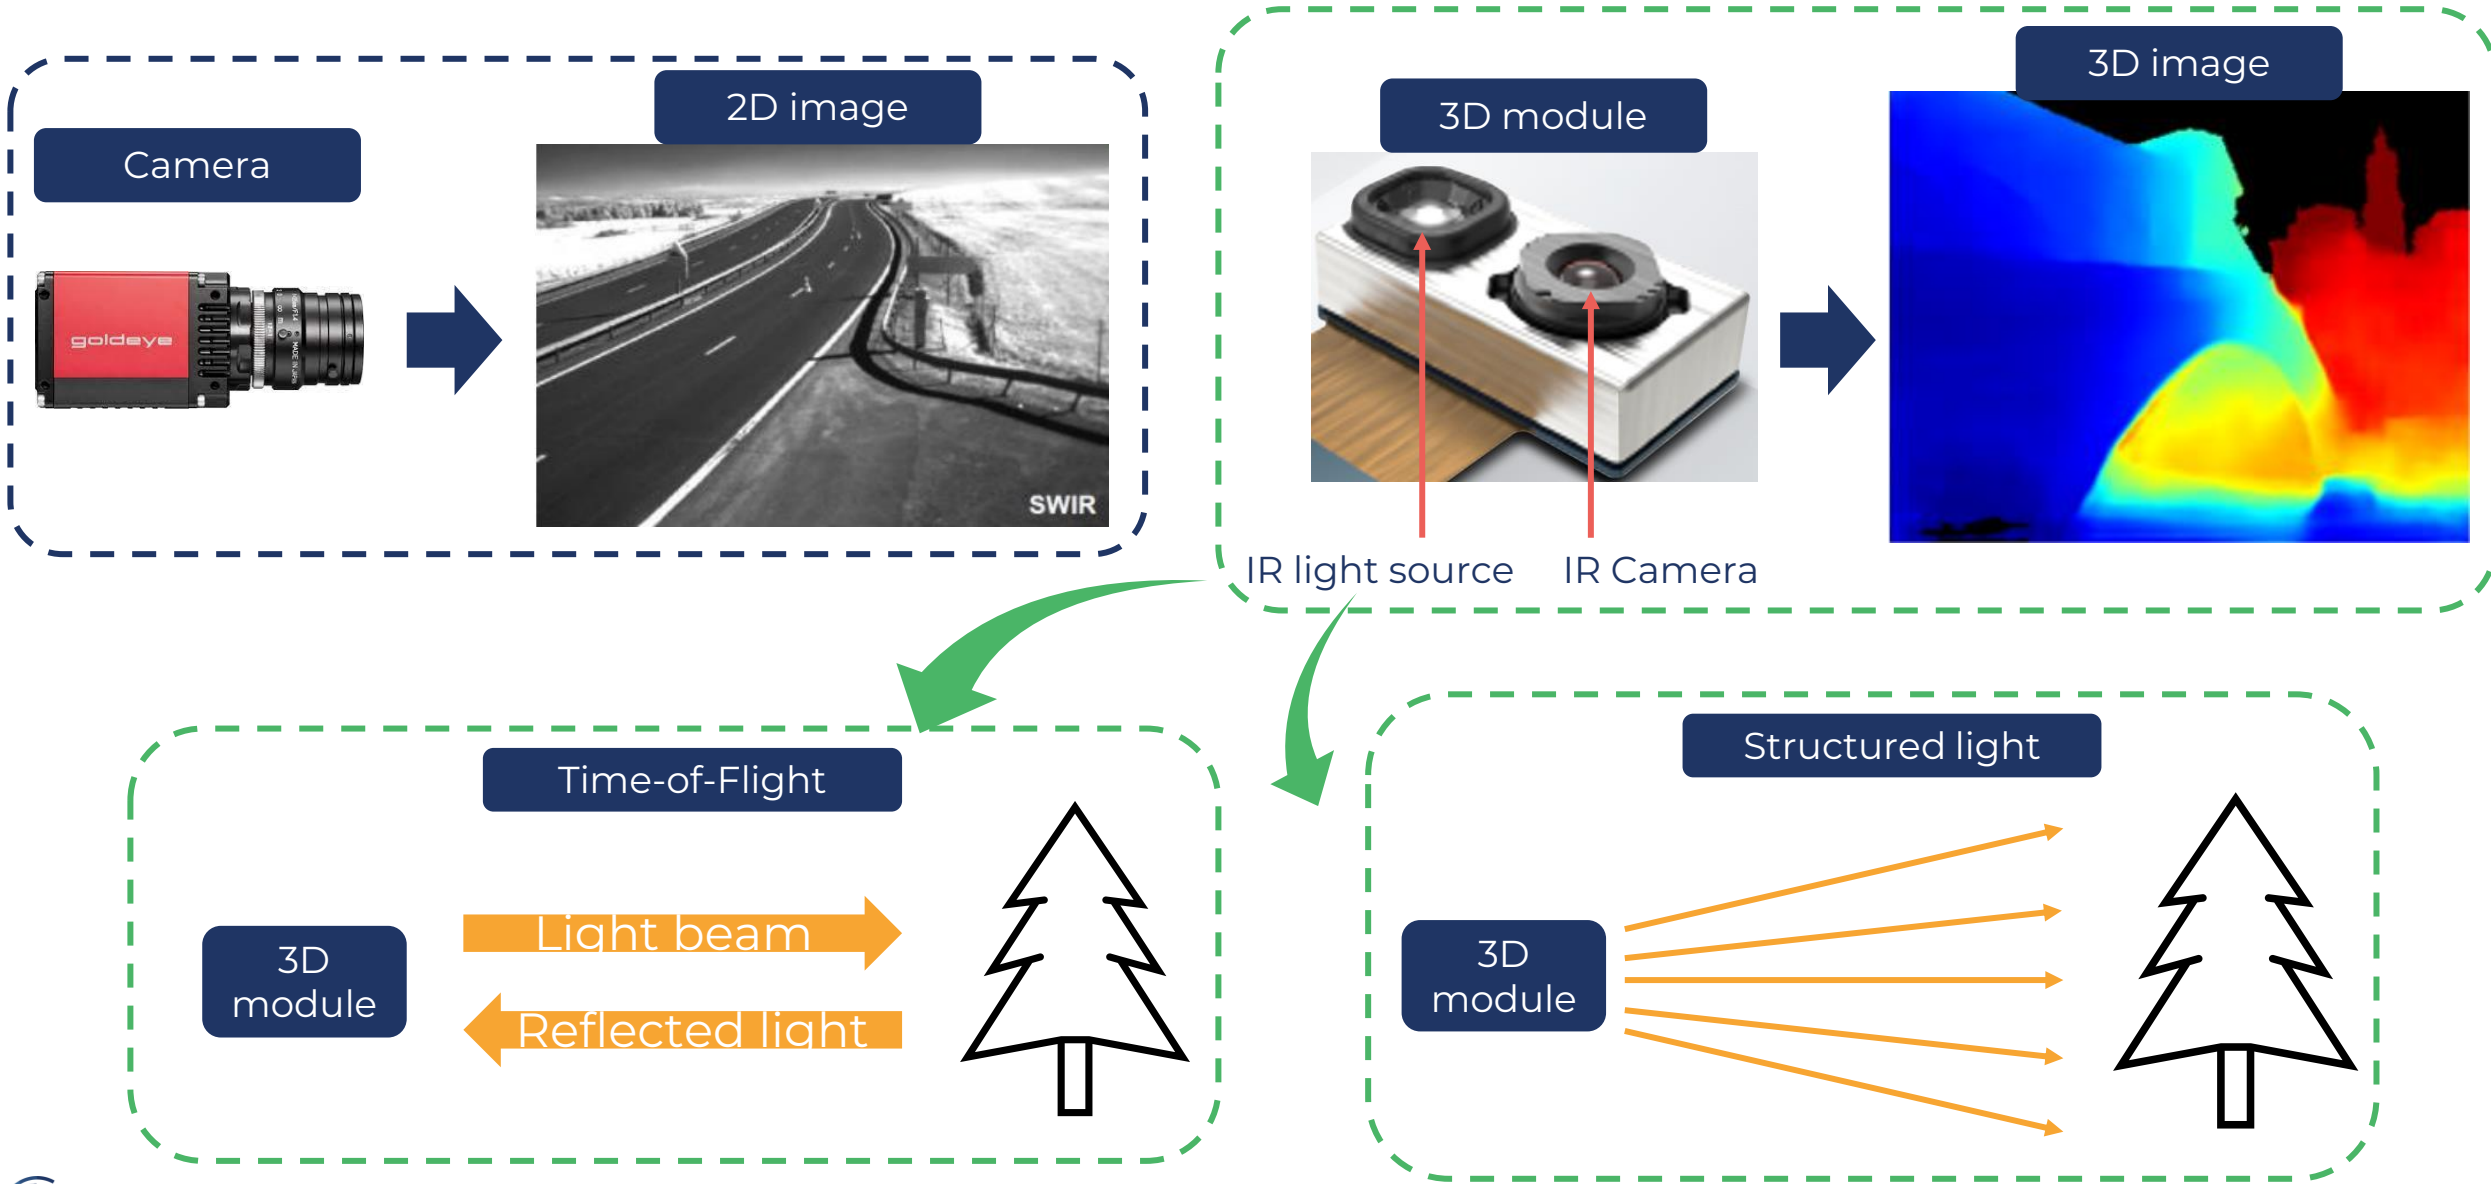

Reflective

Emissive

FEW WORDS ON ACTIVE 3D SENSING

THE INFRARED WORLD

Advantage of SWIR

	VIS	NIR	SWIR	LWIR
Strength	<ul style="list-style-type: none"> Comprehensive images Uses silicon sensors 	<ul style="list-style-type: none"> Comprehensive images Uses silicon sensors Active 3D sensing 	<ul style="list-style-type: none"> Long range active 3D sensing “See through” capability Spectral signature of objects 	<ul style="list-style-type: none"> No need for light source “See through” capability Highlight heat sources
Weakness	<ul style="list-style-type: none"> No active 3D sensing 	<ul style="list-style-type: none"> No color Moderate detection range 	<ul style="list-style-type: none"> No low-cost technology 	<ul style="list-style-type: none"> Less comprehensive image No low-cost technology

WHY SWIR IS BETTER FOR ACTIVE 3D

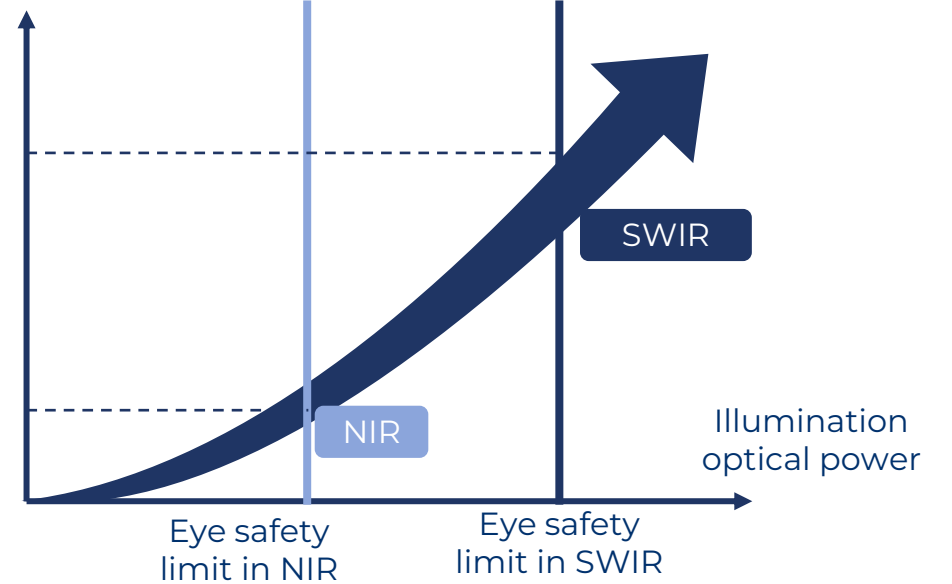

Less parasitic ambient light

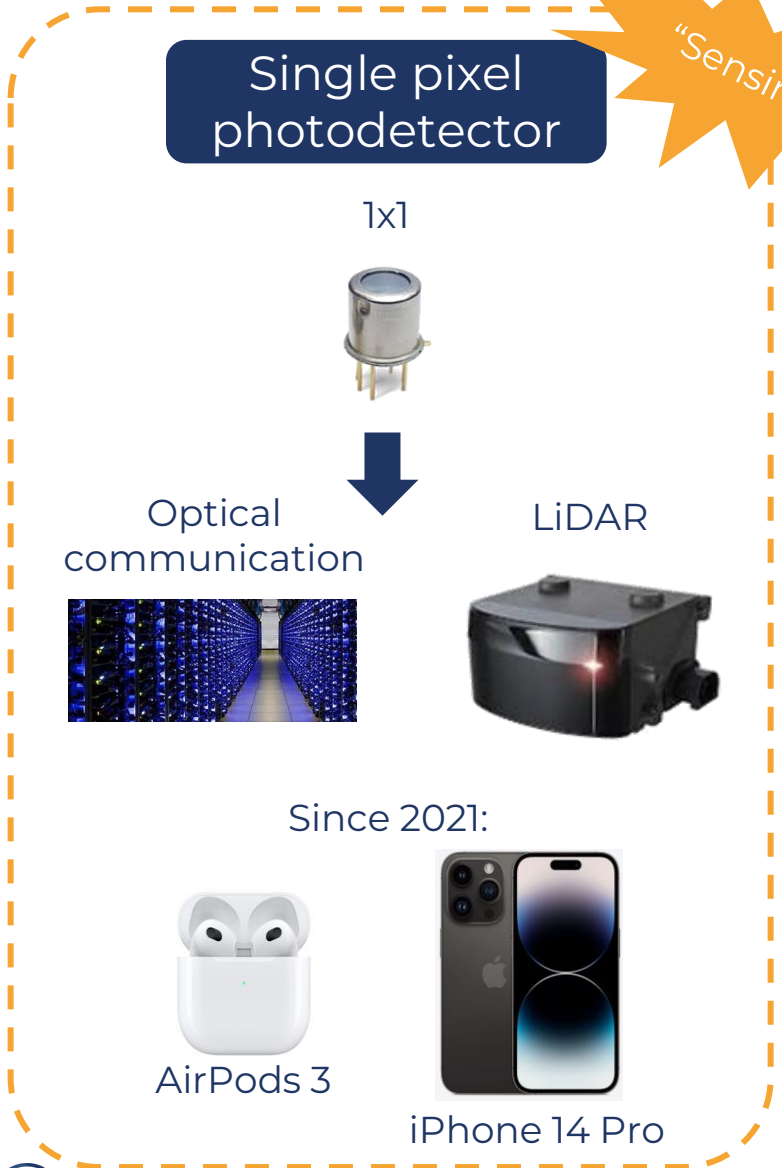

More powerful active illumination

Detection range

TYPES OF SWIR PHOTODETECTORS

Linear detector

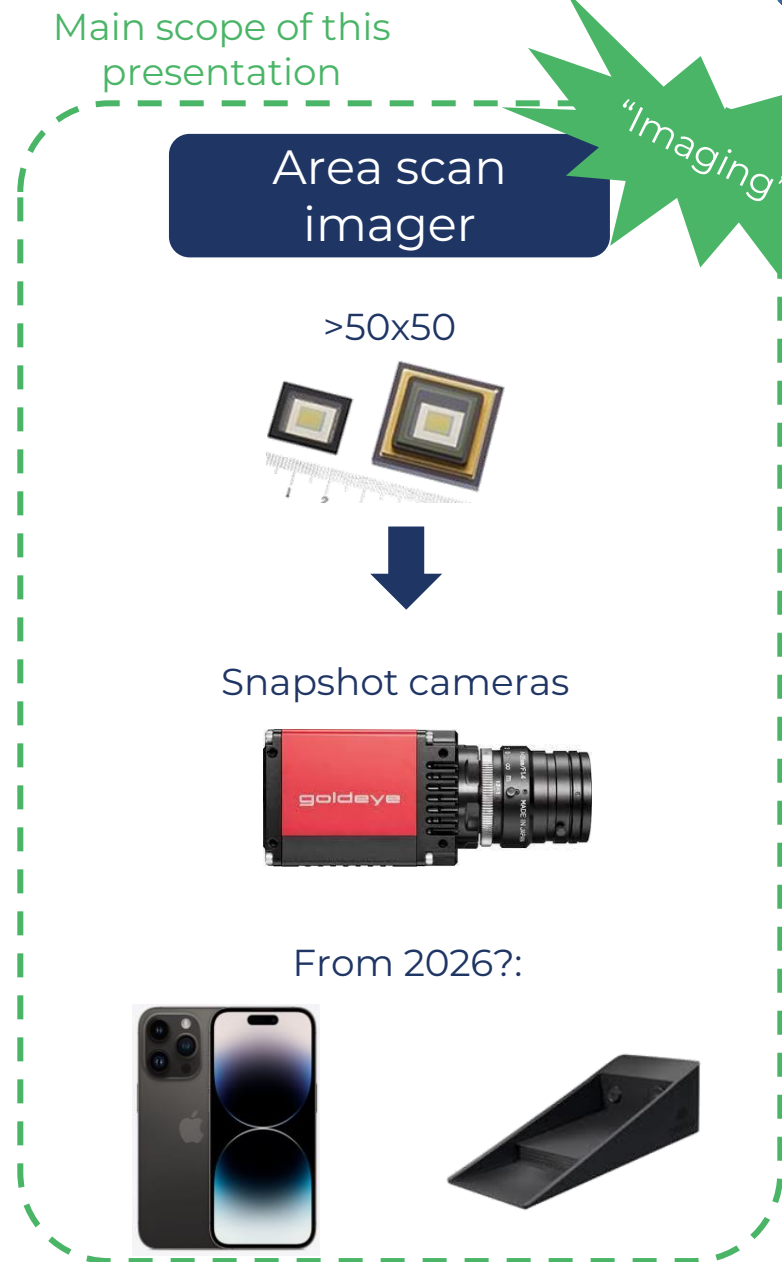

1x128 → >1x2480

Spectrophotometers

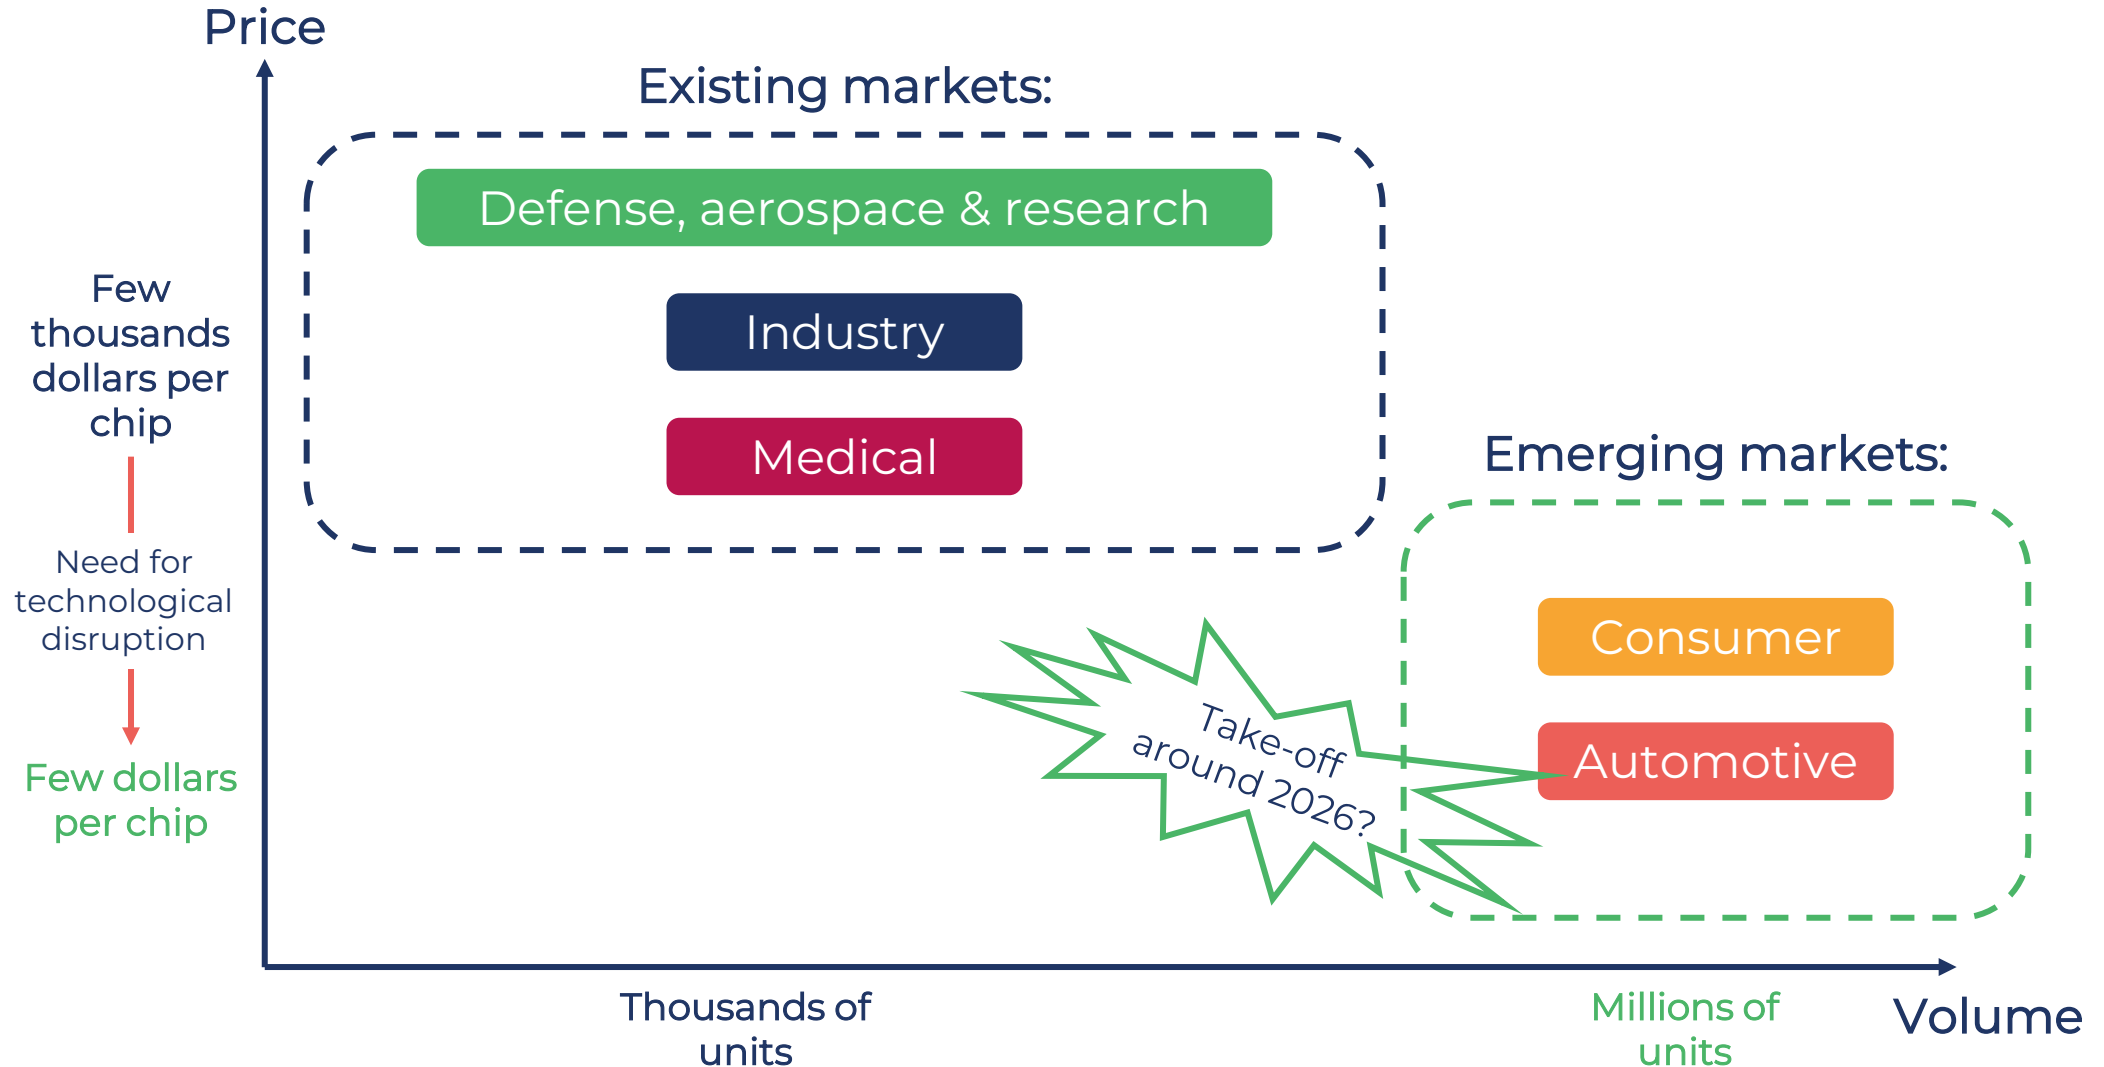

Line-scan cameras

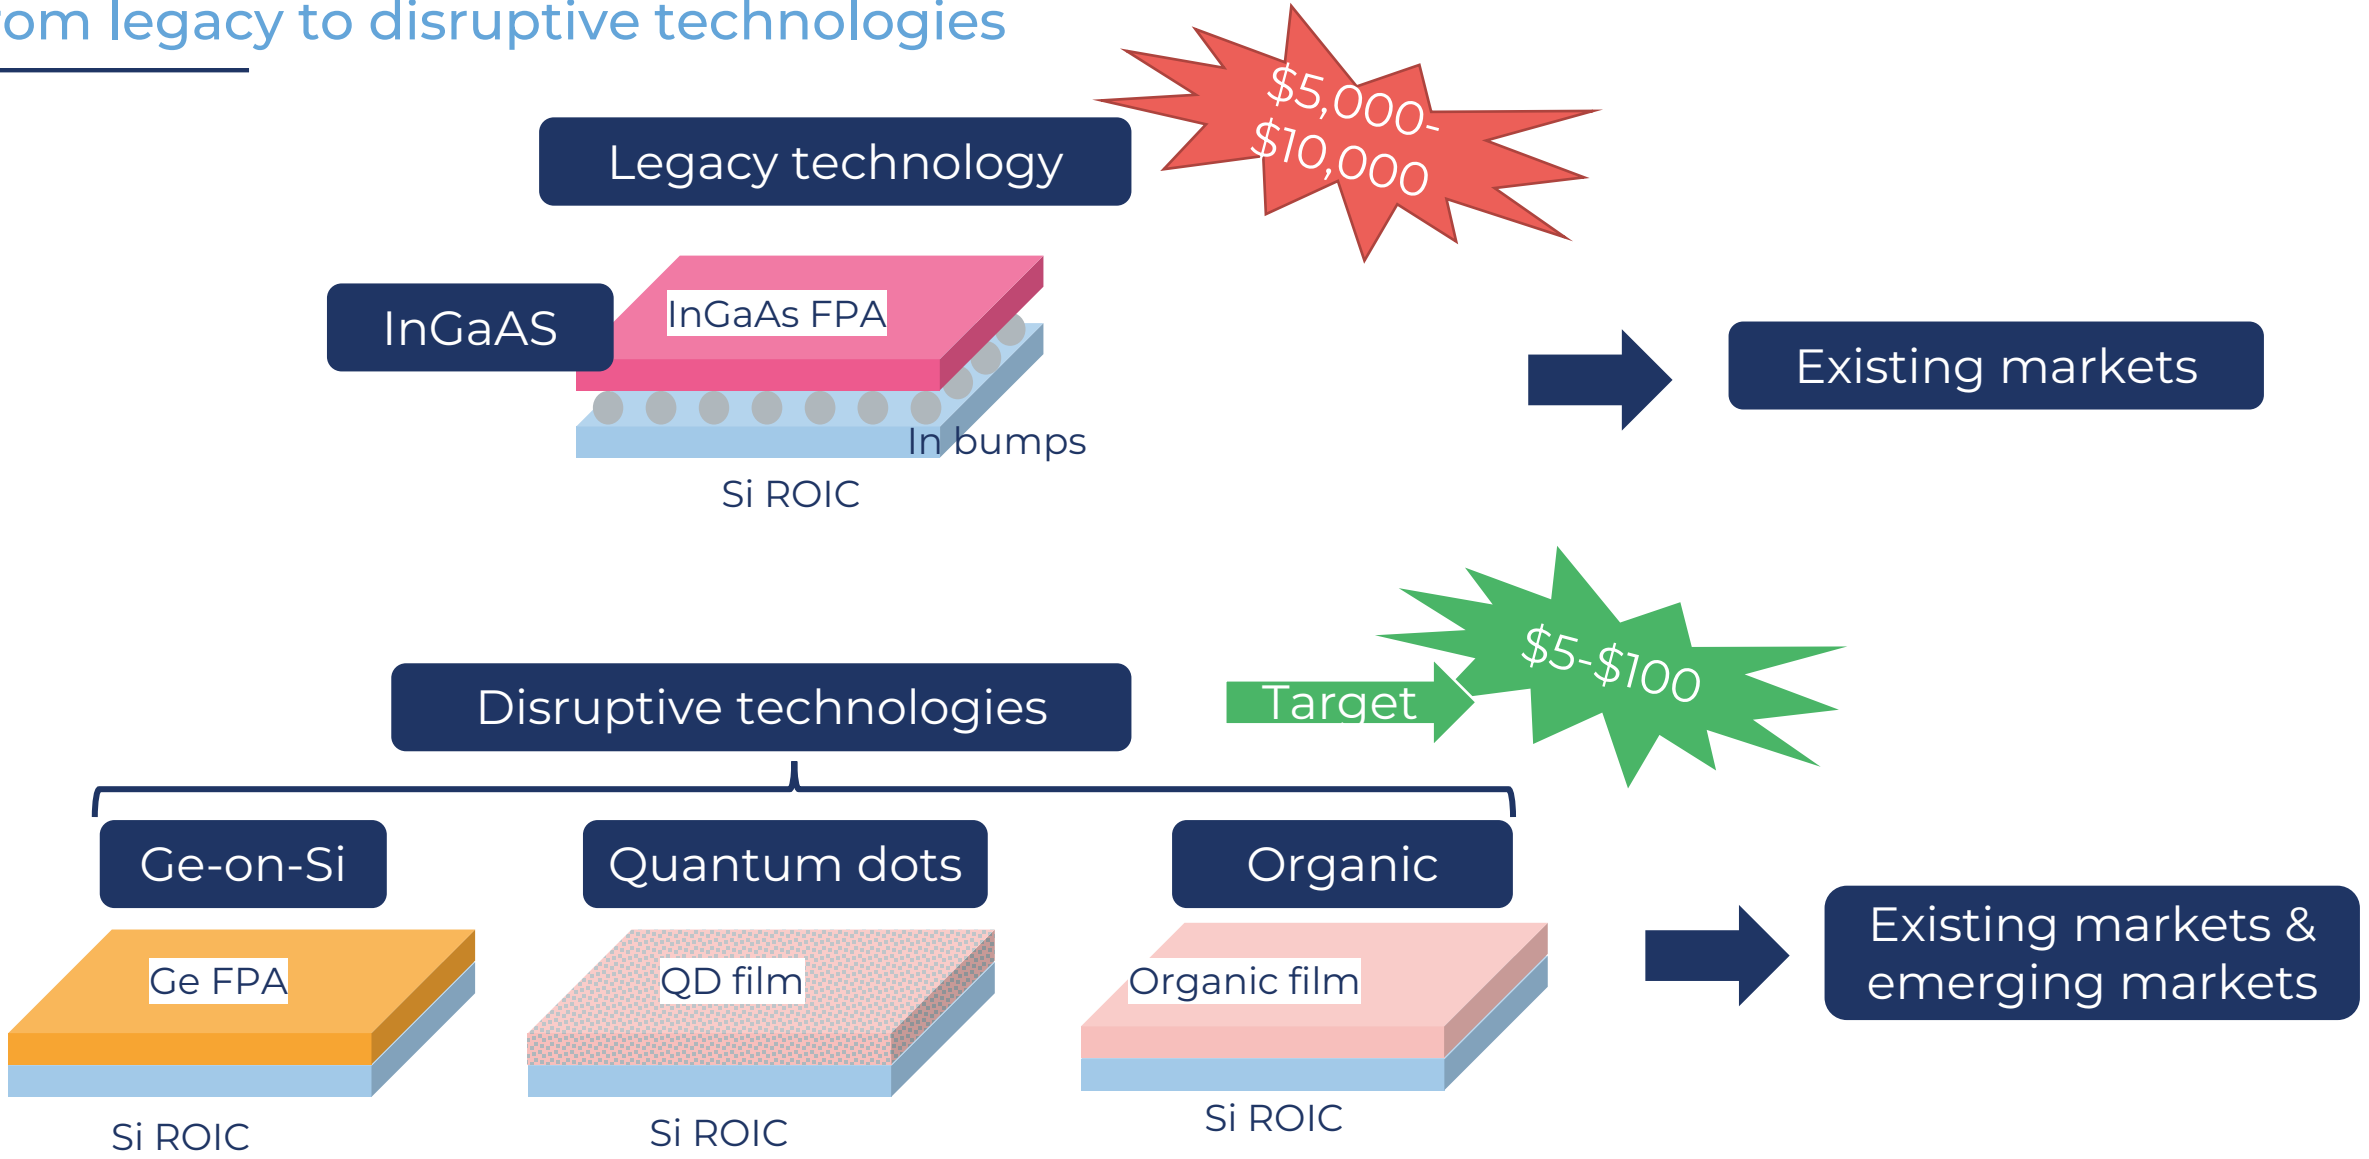

EXISTING AND EMERGING MARKETS

The two-speeds of SWIR imaging industry

SWIR TECHNOLOGY COMPARISON

From legacy to disruptive technologies

Existing markets: defense & industry

EXISTING MARKETS

Defense: laser target designation

Source: Sensors unlimited

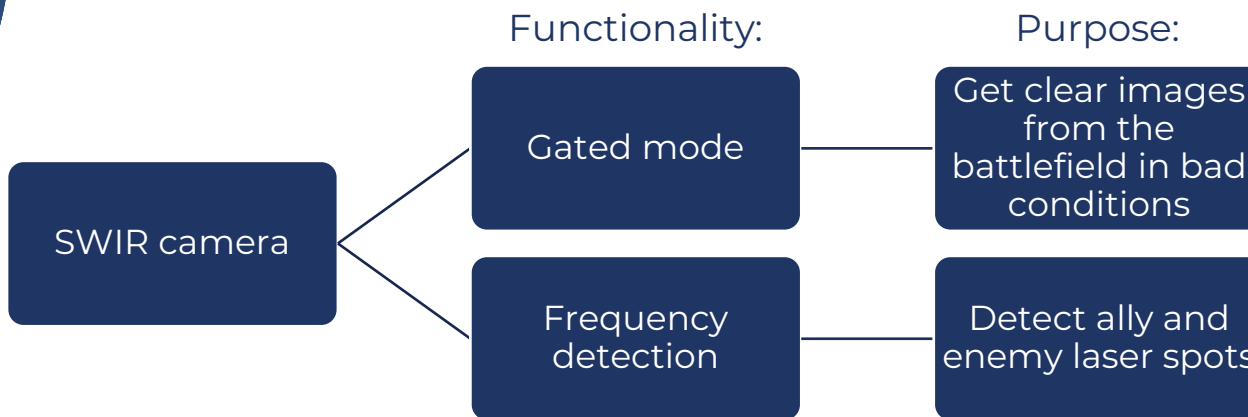

Rafael Litening pod

Elbit CLRF-IC

SWIR imaging is used for laser target designation in pods (vehicle), and soldier equipment.

Advantage of SWIR over NIR:

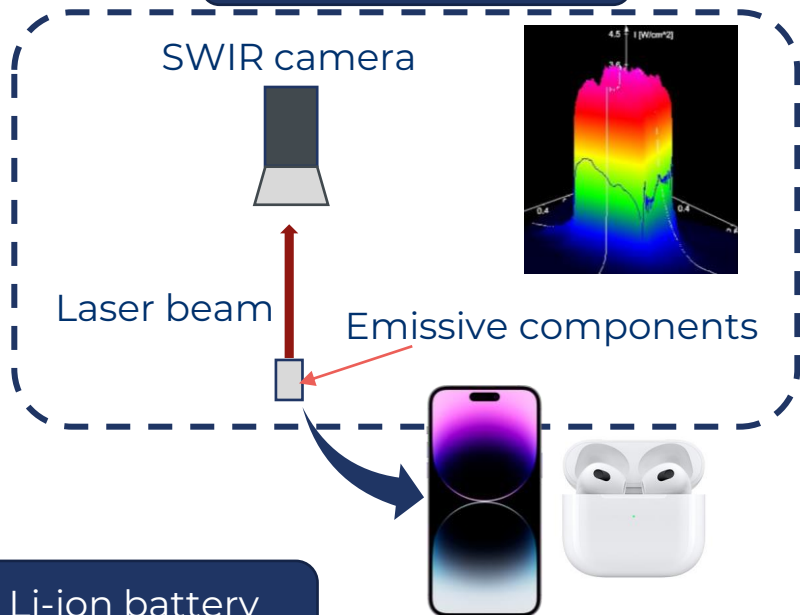

- Longer range detection:
 - See through smoke & dust
 - Higher light source power (eye safety)
- Higher stealth:
 - Fewer countries or armed groups are equipped with SWIR technologies

EXISTING MARKETS

Industry: driving applications

Laser beam inspection:

Li-ion battery inspection

Wafer inspection:

Optical sorting:

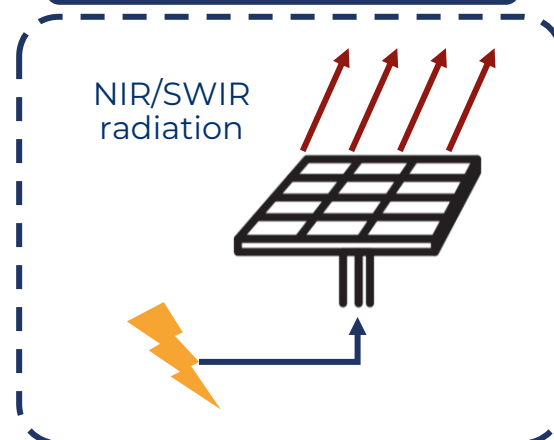

Linescan cameras

Multispectral

Extended sensitivity (>1.7μm)

Solar cells inspection

Content inspection:

Source: SWIR Vision System

EXISTING MARKETS

SWIR image sensor makers

Most of players focus on InGaAs.

Newcomers provide newer technologies.

InGaAs imagers

QD imagers

 Newcomers

Ge imagers

EXISTING MARKETS

InGaAs imagers

Resolution	SUI	SCD	Teledyne FLIR	Lynred	NIT	Xenics	Sony	Attollo	Hamamatsu	I3system	Chunghwa	Teledyne Dalsa	Princeton infrared	Ghopto
QVGA	12.5μm				15μm 25μm	20μm 30μm			20μm	15μm 25μm	30μm			15μm
VGA	12.5μm 15μm	15μm	15μm	15μm	15μm	20μm	5μm	5μm	20μm		15μm			15μm
SXGA/XGA	12.5μm	10μm			10μm		5μm	5μm					12μm	15μm
1980x1080														

- Average resolution: VGA
- Average pitch: 15μm

EXISTING MARKETS

InGaAs imager manufacturing

Legacy technology

Wafer size mismatch

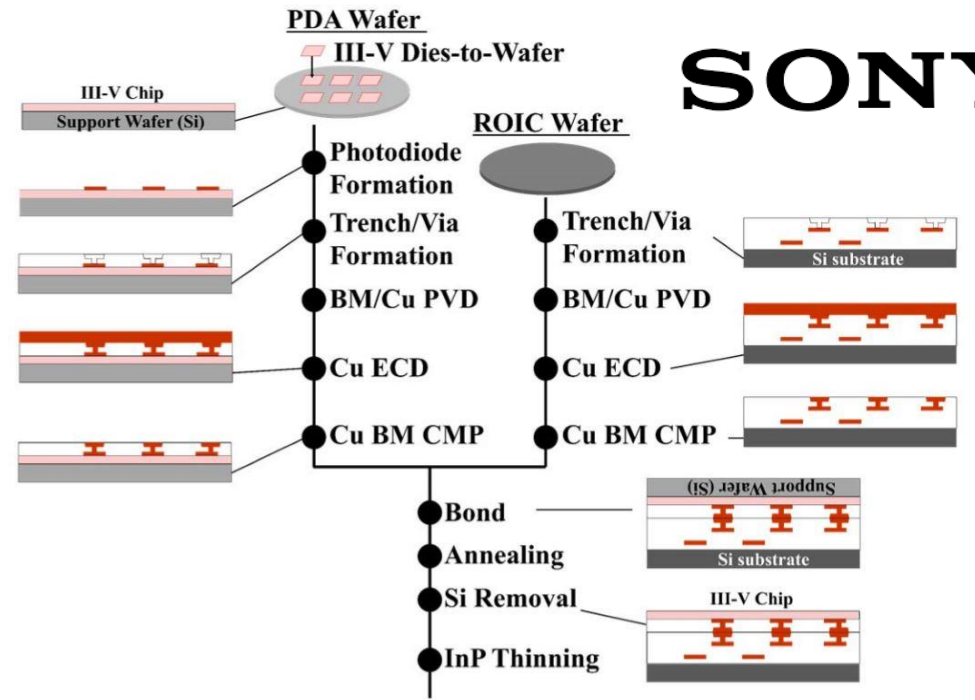

Dicing:

Bonding:

Poor yield

SONY

EXISTING MARKETS

Newcomers' value proposition

Lower cost:

Higher resolution:

320x180p

1.3Mp

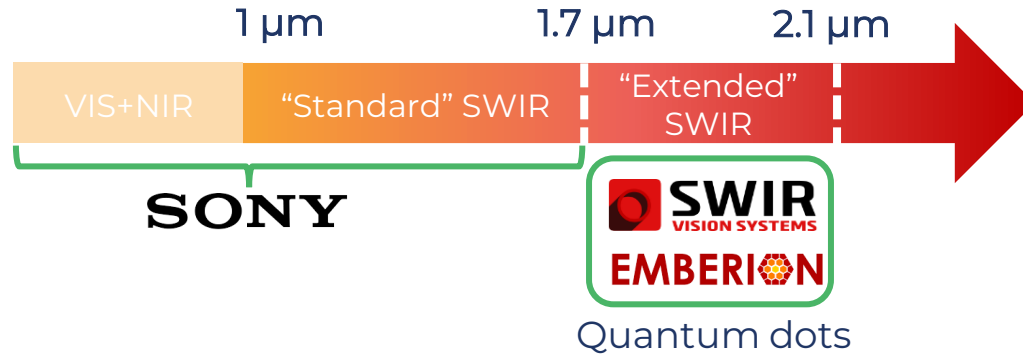

2.1Mp

Average

Quantum dots

Extended spectral range:

Integrability:

As a tradeoff, these devices have lower quantum efficiency and higher noise than legacy technologies

EXISTING MARKETS

Key takeaways

- ~11,000 units have been shipped in 2021 to serve existing applications (SWIR imaging is a niche industry).
- The driving applications are: laser target designation in defense, electronic component and optical sorting in industry.
- Leading players make InGaAs imagers. Two companies making quantum dots cameras entered the market in the last years.
- Most of products have VGA resolution and 15 μ m pixel pitch.
- Newcomers bring lower-cost technologies and new characteristics (extended spectral sensitivity) at cost image quality.

Emerging market: consumer and automotive

EMERGING MARKETS

Consumer: initial SWIR adoption in 2021/2022

Apple starts integrating SWIR sensing in consumer devices.

Will SWIR imaging follow?

EMERGING MARKETS

Towards under-display 3D modules?

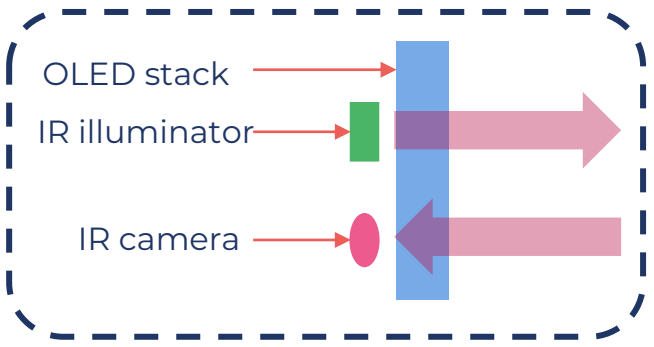

Under-display proximity sensor:

Under-display facial recognition?

Going through the OLED:

Why SWIR?

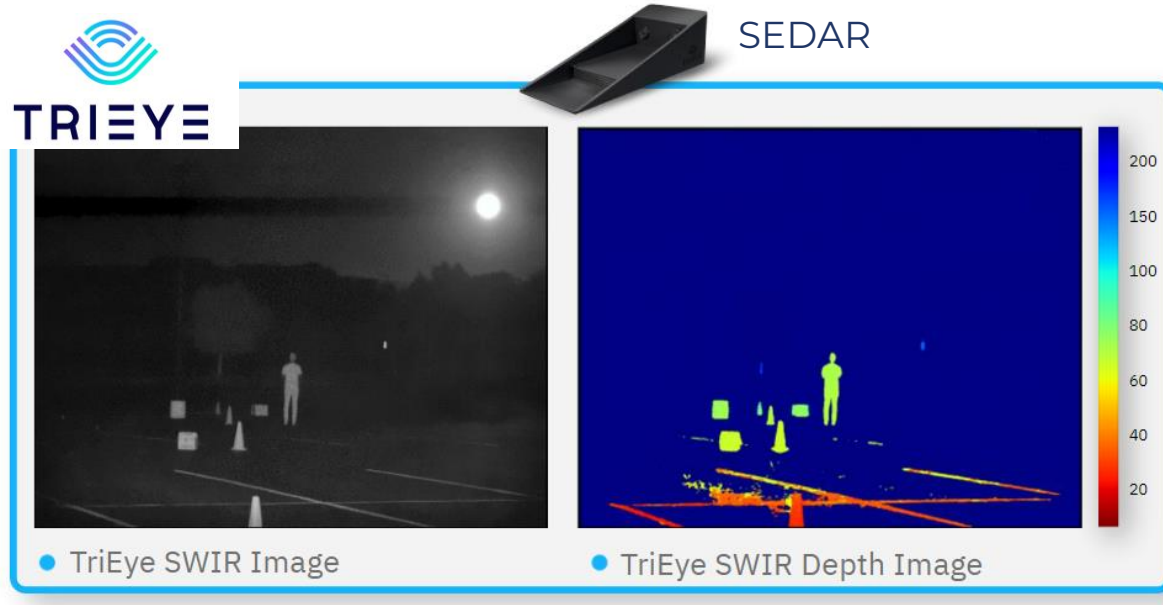

- Transparency of OLED
- Higher SNR
- Lower risk of damage on OLED

EMERGING MARKETS

SWIR in automotive

SWIR Imaging:

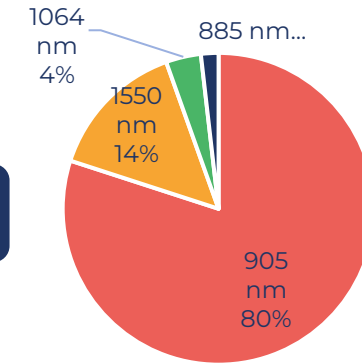

For ADAS:

- Get 2D & 3D information at the same time
- Immune to parasitic sunlight, low-light conditions, dust, fog, rain.
- Longer range imaging

SWIR LiDAR:

Design win split by wavelength in 2022

Interest from the LiDAR ecosystem:

EMERGING MARKETS

SWIR imaging for ADAS (automotive)

	Visible cameras	Thermal cameras	SWIR gated cameras	LiDAR
Resolution	1.3Mp → 6Mp	0.3Mp	1.3Mp	/
Supports night vision and bad weather	No	Yes	Yes	Yes
Needs light source	No	No	Yes	Yes
Depth sensing capability	No	No	Yes	Yes

Redundancy

NIR

SWIR

Requires adjustment, but still reflective images

Source: H.Steiner & al. Design of an Active Multispectral SWIR Camera System for Skin Detection and Face Verification, MDPI Sensors, 2016

- Apple integrated SWIR single pixel sensors in its latest products.
- In consumer, SWIR could replace NIR in 3D sensing for under-display integration of facial recognition modules. It could also help improving performance 3D sensing in outdoor conditions.
- In automotive, Trieye works on a gated imaging system which promises to achieve 2D and 3D imaging within a single module. A large number of LiDAR players are interested in 1,550nm wavelength.
- CMOS image sensor suppliers are not really involved yet in SWIR (except STMicroelectronics and Sony). Will they help SWIR imaging industry to take-off?
- A technology disruption is required to address these markets. The candidates are Ge-on-Si, Quantum dots and Organic image sensors.
- Optics and software parts of SWIR imaging systems will require few adjustments.

Conclusion

CONCLUSION

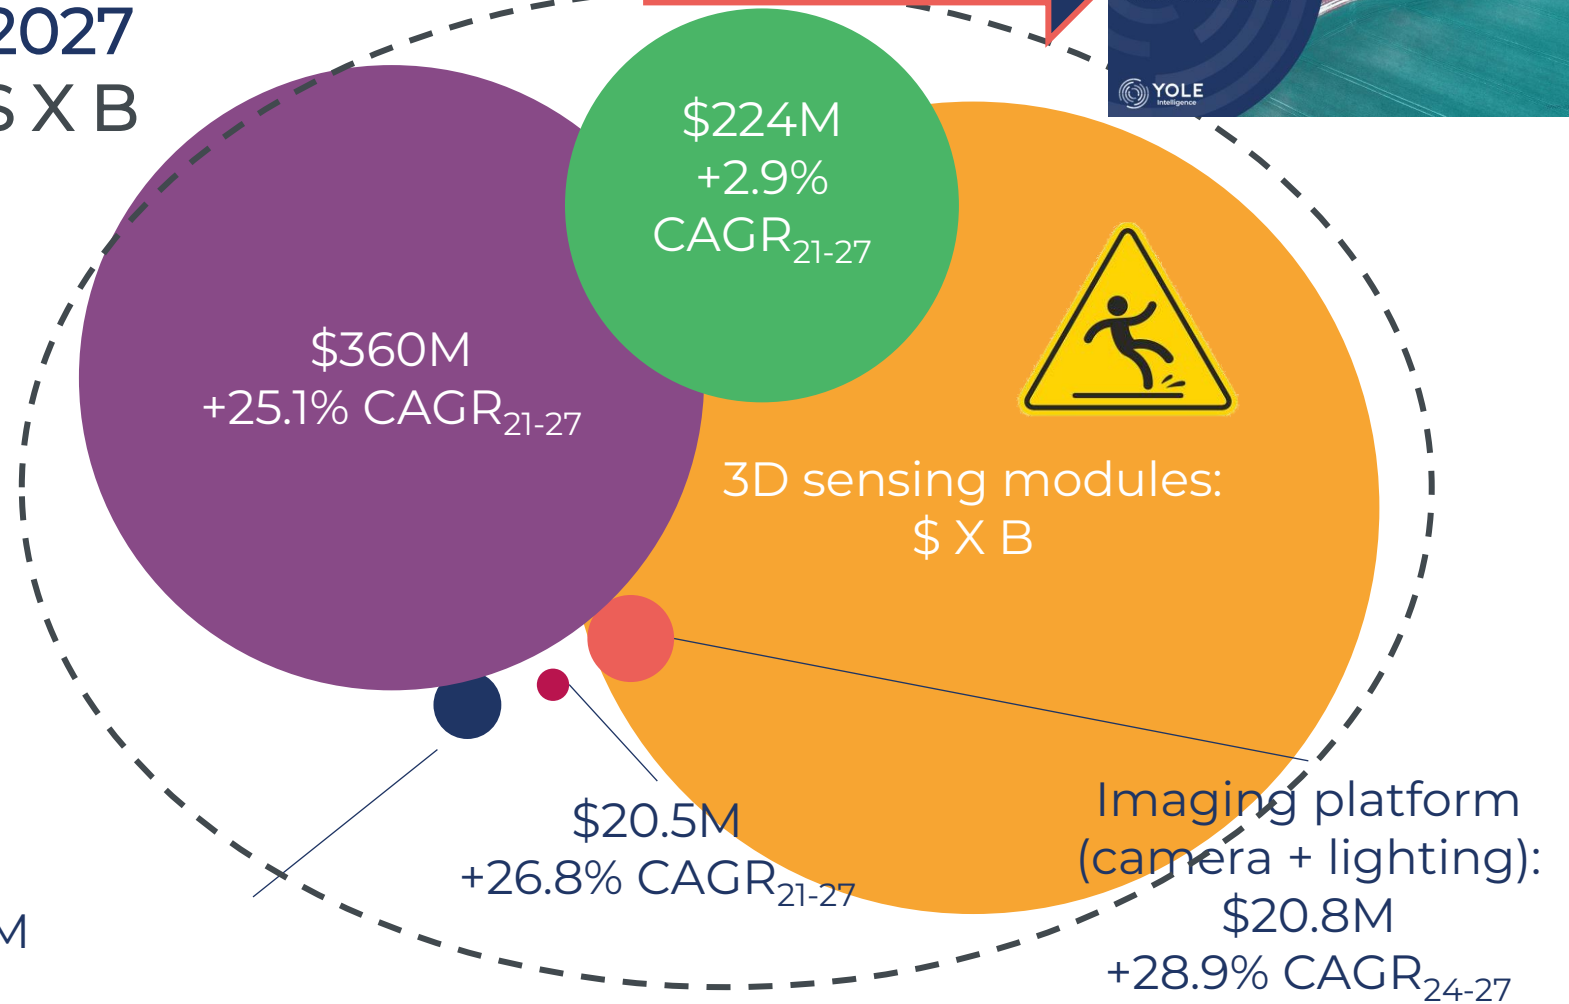

From a niche to mass market?

- Defense
- Industry
- Other
- Medical
- Consumer
- Automotive

2027
\$ X B

Forecast to be updated soon...

- SWIR wavelength offers new information and more efficient 3D sensing solutions.
- There are two worlds in the SWIR imaging industry universe. On the one hand, there is the existing markets driving small volumes but high value technologies. On the other hand, there is the emerging markets that could drive larger volumes.
- The rise SWIR imaging mass market will require important technological disruption and supply chain efforts.
- While the penetration of SWIR imaging in consumer is an optimistic scenario, it could happen. Recent integration of SWIR sensors in smartphones and wearables shows the interest of major consumer electronics integrators in this wavelength. The first SWIR imagers could be integrated starting in 2025/2026.

Empowering Product Creators to Harness Edge AI and Vision

The Edge AI and Vision Alliance (www.edge-ai-vision.com) is a partnership of 100+ leading edge AI and vision technology and services suppliers, and solutions providers

Mission: To inspire and empower engineers to design products that perceive and understand.

The Alliance provides low-cost, high-quality technical educational resources for product developers

Register for updates at www.edge-ai-vision.com

The Alliance enables edge AI and vision technology providers to grow their businesses through leads, partnerships, and insights

For membership, email us: membership@edge-ai-vision.com

edge ai + vision
ALLIANCE™

Join us at the Embedded Vision Summit

May 22-25, 2023—Santa Clara, California

The only industry event focused on practical techniques and technologies for system and application creators

- *“Awesome! I was very inspired!”*
- *“Fantastic. Learned a lot and met great people.”*
- *“Wonderful speakers and informative exhibits!”*

Embedded Vision Summit 2023 highlights:

- **Inspiring keynotes** by leading innovators
- High-quality, practical **technical, business and product talks**
- Exciting **demos, tutorials** and **expert bars** of the latest applications and technologies

Visit www.EmbeddedVisionSummit.com to learn more and register
